

MySQL Workbench

1. Download and Install MySQL Workbench (<https://www.mysql.com/products/workbench>). NOTE: Windows users may have to install dependent software. Follow prompts.
2. Open MySQL Workbench
3. After opening MySQL Workbench, click on “Database” → “Connect to Database”

MySQL Workbench

4. After clicking on Connect to Database, enter the IP, username, password and port.
5. Click “ok”. It may bring you back to home screen but here you can click on your new connection

MySQL Workbench

6. Right Click on ENT5920 Schema and set to Default.
7. Note query window and query results
8. To run query, highlight query and click on lightning bolt.

Run query here

Query window

```
1 SELECT siteID, treatment, soil
2 FROM sites;
3
4
5 If you do not set default schema, you will need to designate the database before the table name
6 SELECT siteID, treatment, soil
7 FROM ENT5920.sites;
```

Choose database here

siteID	treatment	soil
1	T	clay
2	C	silt
3	T	clay
4	C	sand
5	T	sand
6	C	silt

Query results
